

**Spectratek Micro-Embossed Metalized Polyester**  
**with Pressure Sensitive Adhesive and 90lb.**  
**Stayflat Liner**

### Application

These products are intended for use as a high quality marking in applications requiring metallic luster, durability and dimensional stability.

### Product Construction

The film is a .002" Print Treated Polyester which has been micro-embossed with a holographic or metallic pattern and then metalized with Aluminum. Adhesive is a permanent pressure sensitive adhesive. Liner is a 90 lb. stayflat liner.

### Product Variations

These products come in a number of different holographic and engraved steel-like patterns.

### Thickness

Total thickness film and adhesive is .0027" - .003"

### Minimum Application Temperature

+35 deg F

### Service Temperature Range

-50 deg F to + 275 deg F

### Expected Lifetime Exterior

Polyester films are not recommended for outdoor use.

### Adhesion

45 oz/in

### Water Resistance

Excellent

### Humidity Resistance

Excellent

### Solvent Resistance

Good for most petroleum solvents and lower aliphatic alcohols. For ultimate solvent resistance, edge sealing is recommended.

## Shelf Life

Two years when stored under conditions of 70 deg F and 50% relative humidity.
