Avery Dennison® 800 Premium Cast

Features

- · True cast performance
- · Excellent value for money
- · Excellent durability and outdoor performance
- · Excellent layflatness and stability during printing and cutting
- · High gloss for superior appearance
- · Contrasting blue liner on white for easy weeding
- · Long term removability
- Superior conformability to most curved and corrugated surfaces

Description

Film: 50 micron cast vinyl

Adhesive: Permanent acrylic

Backing: one side coated Kraft paper, 135 g/m²

Outdoor life: Up to 10 years

Colours: 100 standard

Conversion

Flat bed cutters
Cold overlaminating
Friction fed cutters
Estat printing
Water based inkjet
Thermal transfer
Screen printing
UV Cured inkjet

Custom Colours

A fast colour matching service is offered for projects where specific colours are required. A minimum order quantity of $300m^2$ is required.

Uses

Avery Dennison 800 Premium Cast is ideal for a wide range of general Signage applications where cast film durability and outdoor performance is required on flat and most curved surfaces.

Common Applications

- Corrugated trucks
- Flat sided trucks
- Cars and vans
- Buses
- · Trains and light rail
- · Architectural signage
- Directional signage
- · Window graphics

Physical characteristics

General

Caliper, facefilm	ISO 534	50 micron
Caliper, facefilm & adhesive	ISO 534	75 micron
Dimensional stability	DIN 30646	0.20mm max
Elongation	DIN 53445	130%
Gloss	ISO 2813, 20º	50%
Adhesion, initial	FINAT FTM-1, stainless steel	460 N/m
Adhesion, ultimate	FINAT FTM-1, stainless steel	640 N/m
Flammability		Self extinguishing
Shelf life	Stored at 22°C/50-55 % RH	2 Years
Accelerated ageing	DIN 53387	No negative impact
	1500 hours exposure	film performance
Expected Durability **	Vertical exposure	
	Black & white	10 years
	Colours & transparent	8 years
	Metallics	5 years

^^Horizontal applications are not warranted and do not have any expectations of durability. The exposure of films in the horizontal position invalidates any performance expectations as stated in appropriate Product Data Sheets. Instructional Bulletins and ICS Performance Guarantee Durability Bulletins. Films may retain legibility, but will not provide published expected durability for gloss, colour retention, chalking, dimensional stability and overall aesthetic performance.

Thermal

Application temperature	Minimum: + 10°C
Temperature range	- 40°C to + 110°C

Chemical

Humidity resistance	120 hours exposure	No effect
Corrosion resistance	120 hours exposure	No contribution to corrosion
Water resistance	48 hours immersion time	No effect

Important

Information on physical characteristics is based upon tests we believe to be reliable. The values listed herein are typical values and are not for use in specifications

They are intended only as a source of information and are given without guarantee and do not constitute a warranty. Purchasers should independently determine, prior to use, the suitability of any material for their specific use.

All technical data is subject to change without prior notice.

Warranty

Avery Dennison® materials are manufactured under careful quality control and are warranted to be free from defect in material and workmanship. Any material shown to our satisfaction to be defective at the time of sale will be replaced without charge. Our aggregate liability to the purchaser shall in no circumstances exceed the cost of the defective materials supplied. No salesman, representative or agent is authorised to give guarantee, warranty, or make any representation contrary to the foregoing.

All Avery Dennison® materials are sold subject to the above conditions, being part of our standard conditions of sale, a copy of which is available on request.

**Expected Durability

The expected durability of Avery Dennison films are defined as the expected performance life of the Avery Dennison graphic film(s) within Zone 1 of the Avery Dennison zone system, in outdoor vertical exposure conditions.

The actual performance life will depend on a variety of factors, including selection and preparation of substrate, angle and direction of exposure, application methods, environmental conditions and cleaning/maintenance of the films. In case of films used in areas of high temperatures or humidity, high altitudes and industrially polluted areas the performance will be further reduced.

Expected Durability and Warranted Period Definitions

Expected durability is the expected period of time defined in the product data sheet, the product should, but is not warranted to, perform satisfactorily when applied in vertical exposure conditions as defined in Instructional Bulletin 1.30. The warranted period as defined in appropriate ICS Performance Guarantee Bulletin , is the maximum period of time Avery Dennison will warrant the finished products performance in accordance with ICS Performance Guarantee Terms and Conditions 1.0, provided that the film is properly stored, converted and installed in accordance with Avery Dennison guidelines.

Test Methods

Dimensional stability:

Is measured on a 150 x 150 mm aluminium panel to which a specimen has been applied: 72 hours after application the panel is exposed for 48 hours to + 70°C, after which the shrinkage is measured.

(FTM-1, FINAT) is measured by peeling a specimen at a 180° angle from a stainless steel or float glass panel, 24 hours after the specimen has been applied under standardised conditions. Initial adhesion is measured 20 minutes after application of the specimen.

A specimen applied to aluminium is subjected to the flame of a gas burner for 15 seconds. The film should stop burning within 15 seconds after removal from the

Temperature range: A specimen applied to stainless steel is exposed at high and low temperatures and brought back to room temperature. 1 hour after exposure the specimen is examined for any deterioration. Note: Prolonged exposure to high and low temperatures in the presence of chemicals such as solvents, acids, dyes, etc. may eventually cause deterioration.

Chemical Resistance:

All chemical tests are conducted with test panels to which a specimen has been applied. 72 hours after application the panels are immersed in the test fluid for the given test period. 1 hour after removing the panel from the fluid, the specimen is examined for any deterioration.

Corrosion Resistance:

A specimen applied to aluminium is exposed to saline mist (5% salt) at 35°C. After exposure, the film is removed and the panel is examined for traces of corrosion.
